## **Recommended Storage Conditions and Shelf Life of** SDM<sup>®</sup>17, 10% Nitroglycerin on Lactose Monohydrate, USP

## **Manufacturing Facility:**

Copperhead Chemical Company Inc. 120 River Road, Tamaqua, PA 18252

The shelf life stability of SDM<sup>®</sup>17, Diluted Nitroglycerin USP (10% Nitroglycerin on Lactose Monohydrate) is at least two years (24 months) when stored at the recommended temperatures of between 4°C and 30°C.

However, SDM<sup>®</sup>17 is not recommended to be stored below 15°C because the powder is no longer free-flowing. This occurs because nitroglycerin starts to solidify at 13°C. If allowed to return to a temperature of 15°C or above, the powder will regain its free-flowing properties.

Please feel free to contact me should you have any further questions by way of email address at <u>dclarke@copperheadchemical.com</u>.

Sincerely,

Dawn Clarke Regulatory Affairs Manager
